Application/Control Number: 10/542,006

Art Unit: 2852

#### **DETAILED ACTION**

## Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

## **Drawings**

2. The content of the drawings are approved to by the examiner.

#### Title

3. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

# Information Disclosure Statement

4. The information disclosure statement/s (IDS) submitted on 10-12-2005 was considered by the examiner.

## Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Application/Control Number: 10/542,006

Art Unit: 2852

6. Claims 1-2, 5-10 and 12 are rejected under 35 U.S.C. 102(e) as being anticipated by Kato et al. (2004/0253027A1).

Kato et al. teaches an image heating apparatus comprising a rotatable ring-shaped heatproducing medium that produces heat through action of magnetic flux; a magnetic flux generation section 1 that is located in proximity to a first peripheral surface of said heatproducing medium and generates magnetic flux that acts upon said heat-producing medium; a magnetic flux adjustment section 6 that is located rotatably in proximity to a second peripheral surface of said heat-producing medium, and has a paper passage area magnetic flux adjustment medium that adjusts magnetic flux acting upon a paper passage area of said heat-producing medium, and a paper non-passage area magnetic flux adjustment medium, with a different rotational phase from said paper passage area magnetic flux adjustment medium, that adjusts magnetic flux acting upon a paper non-passage area of said heat-producing medium; and a synchronization control section that controls magnetic flux generation timing of said magnetic flux generation section in synchronization with rotational phases of magnetic flux adjustment units of said magnetic flux adjustment section [0090]. The rotational speed of said magnetic flux adjustment section is different from rotational speed of said heated heat-producing medium [0107]. The downstream end of an area of said magnetic flux adjustment section opposite said magnetic flux generation section rotates at a speed greater than or equal to movement up to an upstream end on an opposite side while an arbitrary part of said heat-producing medium passes through an area opposite said magnetic flux generation section (figure 6). The image magnetic flux adjustment section has a configuration in which said paper passage area magnetic flux adjustment medium and said paper non-passage area magnetic flux adjustment medium are

Application/Control Number: 10/542,006 Page 4

Art Unit: 2852

provided on a peripheral surface of a cylindrical body. The image heating apparatus wherein a plurality of said paper non-passage area magnetic flux adjustment media are located alternately in a circumferential direction of a center part and both end parts of a surface of said opposed core (figure 3). The image heating apparatus wherein an upstream end of said paper non-passage area magnetic flux adjustment medium is positioned in a center part of said opposed core and downstream ends of said paper non-passage area magnetic flux adjustment medium are positioned at both ends of said opposed core. The image heating apparatus wherein a plurality of said paper non-passage area magnetic flux adjustment media are located alternately in a circumferential direction of a surface of said opposed core.

Kato et al. teaches an image heating apparatus comprising: a rotatable ring-shaped heatproducing medium that produces heat through action of magnetic flux; a magnetic flux
generation section that is located in proximity to a first peripheral surface of said heat-producing
medium and generates magnetic flux that acts upon said heat-producing medium; a temperature
control section that controls said magnetic flux generation section and maintains a
temperature of a surface of said heating medium in contact with a heated medium at a
predetermined temperature; and a calorific value distribution adjustment section that
selectively adjusts magnetic flux acting upon a predetermined area of said heat-producing
medium and uniformizes calorific value distribution of said heat-producing medium [0090-

Allowable Subject Matter

Application/Control Number: 10/542,006 Page 5

Art Unit: 2852

7. Claims 3-4, 11, and 13-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

## **Contact Information**

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Quana M. Grainger whose telephone number is 571-272-2135. The examiner can normally be reached on 8am-6pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Gray can be reached on 571-272-2119. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <a href="http://pair-direct.uspto.gov">http://pair-direct.uspto.gov</a>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
